Full-stack Developer Advocate looking to collaborate with creative, enjoyable people.

Work

Cloudflare - Developer Advocate *November 2017 - Present*

Cloudflare is a global network that secures websites while making them faster. My job was to write code to **Automate Account Creations** for developer programs, run **Developer Outreach Programs**, produce **The Serverlist Newsletter**, write and review **Blog Posts**, give **Live Talks**, create and improve **Documentation**, and sponsor and table **Conferences** to increase our awareness with developers. I beta tested and wrote documentation for our [Serverless Integration](#), published posts on blogs including [Okta](#) and [DocuSign](#), produced newsletter content that was delivered to **28,000 Developers**, and gave talks at places like **Oktane 18**, **MHacks**, and [TypeForm](#).

Kroger Technology - Web Developer *April 2017 - November 2017*

Kroger Technology is Kroger's technical division. My job was to build custom **React/Redux** Components for kroger's web app and improve Microsites for child companies of Kroger. I launched and improved department pages that allowed people to shop online for their groceries while maintaining websites dedicated to local, Kroger-owned grocery stores.

Eager.io (now Cloudflare Apps) - Web Development Intern *March 2016 - June 2016*

Eager.io was a platform that allowed developers to create a single **HTML/CSS/JS library** and publish to **WordPress**, **Drupal**, and **Joomla**. My job was to build libraries, test them across browsers, incorporate feedback and deliver high-quality tools. Many apps I built now run on thousands of websites and were built using **Babel** and **Node.js**.

Projects

Personal Blog: A **Ghost.io** instance for my blog posts and talks.

[Link](#)

Alarm Clock: An Alarm Clock application that allows people to sign up and save alarm times. I developed it using **Go** and **React**, and built a **CI/CD** pipeline on Gitlab for it using **Docker**.

[Link](#) [Backend Code](#) [Frontend Code](#)

Hacker News Clone: A front-end made for Hacker News' read-only API. Built with **React**, **Redux** and **React Router**, it supports routing, searching for posts, and viewing posts and users.
