Full-stack Developer looking to collaborate with creative, enjoyable people.

Work

Cloudflare - Javascript Developer Evangelist *November 2017 - June 2021*

Cloudflare is a global CDN and DDoS mitigation network. My job was to **Write Automation Code** for developer programs, **Program Technical Demos** and write tutorials around them, **Build Documentation Websites** in **Hugo** and **GatsbyJS**, **Build Marketing websites**, and **Work On React Components**. My work helped us **Automate Developer Programs** that onboarded **Thousands of Accounts** and **Saved Hundreds of Man Hours**, made it possible for **Tens of Thousands of New Customers** to be able to use new products at launch, and promoted new posts to **Over 28k People Monthly**.

Kroger Technology - Full-stack Developer *April 2017 - November 2017*

Kroger Technology is Kroger's technical division. My job was to build custom **React/Redux** Components for kroger's web app and improve Microsites for child companies of Kroger. I launched and improved department pages that allowed people to shop online for their groceries while maintaining websites dedicated to local, Kroger-owned grocery stores.

Eager.io (now Cloudflare Apps) - Web Development Intern *March 2016 - June 2016*

Eager.io was a platform that allowed developers to create a single **HTML/CSS/JS library** and publish to **WordPress**, **Drupal**, and **Joomla**. My job was to build libraries, test them across browsers, incorporate feedback and deliver high-quality tools. Many apps I built now run on thousands of websites and were built using **Babel** and **Node.js**.

Projects

Twitter Clone: A **Twitter** clone written in **NextJS**. Uses **TailwindCSS**, **MySQL**, and **ReactJS**.

[Code](#)

Alarm Clock: An Alarm Clock application that allows people to sign up and save alarm times. I developed it using **Go** and **React**, and built a **CI/CD** pipeline on Gitlab for it using **Docker**.

[Link](#) [Back-end Code](#) [Front-end Code](#)

Hacker News Clone: A front-end made for Hacker News' read-only API. Built with **React**, **Redux** and **React Router**, it supports routing, searching for posts, and viewing posts and users.
