Connor Peshek   Full-stack Developer

Nashville, Tennessee - (586) 925-1341 - connor@peshek.dev

[Blog](#) [Github](#) [Gitlab](#)

Full-stack Developer looking to collaborate with creative, enjoyable people.

Work

SuperTokens - Developer Evangelist   *July 2024 - February 2025*

SuperTokens is a company that provides open-source authentication. I wrote documentation demonstrating how to **implement different authentication methods** in **JavaScript, GoLang, and Java**; **Built developer tools** that helped engineers easily **implement multiple authentication methods**, **Wrote Blog Posts** on JavaScript topics like **10 ways to Optimize React Performance** and **how promises work in JavaScript**, and spoke at **IJS San Diego** about the **history of Single Sign-On and JavaScript**.

Cloudflare - Javascript Developer Evangelist   *November 2017 - June 2021*

Cloudflare is a global CDN and DDoS mitigation network. My job was to **Write Automation Code** for developer programs, **Program Technical Demos** and write tutorials around them, **Build Documentation Websites** in **Hugo and GatsbyJS**, **Build Marketing Websites**, and **Update React Components**. My work helped us **Automate Developer Programs** that onboarded **Thousands of Accounts** and **Saved Hundreds of Man Hours**, made it possible for **Tens of Thousands of New Customers** to be able to use new products at launch, and promoted new posts to **Over 28k People Monthly**.

Kroger Technology - Full-stack Developer   *April 2017 - November 2017*

Kroger Technology is Kroger's technical division, a massive grocery store chain in America. My job was to build custom **React/Redux** Components, **CI/CD Pipelines**, and **Automated Testing** for Kroger's web-based e-commerce app and improve Microsites for child companies of Kroger. I launched and upgraded department pages that improved online shopping for over **11 Million Daily Visitors**.

Projects

Conazon —**E-Commerce Store** built using **GoLang** and **ReactJS**. It features a **Microservice Architecture**, **NGINX Api Gateway**, a **CI/CD pipelines**, and a **Home-grown Authentication system**. *Currently only runs in localhost* [Code](#)

Alarm Clock — An Alarm Clock application that allows people to sign up and save alarm times. I developed it using **Go** and **React**, and built a **CI/CD** pipeline on Gitlab for it using **Docker**. [Link](#) [Back-end Code](#) [Front-end Code](#) [NERD/MERN Stack Rebuild](#)

Twitter Clone — A **Twitter clone** written in **NextJS**. Uses **TailwindCSS**, **MySQL**, and **ReactJS**. [Link](#) *(This project takes a minute to load data on first visit due to free hosting/cold start times)* [Code](#)
